

Open student positions at The Footprint Firm

The Footprint Firm is an advisory and investment company founded on a unique business model with a sole focus on sustainability. Since the company was founded 5 years ago, we have made 24 investments in start-ups and scale-ups addressing the climate and biodiversity crisis and raised our first fund a 'deep green' Article 9 venture fund focusing on the pre-seed and seed stage last year.

Analyst

You will be working with the rest of The Footprint Firm on sustainability advisory projects as part of the project teams for external clients e.g. strategy development, GHG accounting and decarbonization strategies, risk and materiality assessments, ESG due diligence, biodiversity assessments and much more. We work across all sectors across a range of countries and with companies of very varying sizes. Moreover, you will be involved in projects, due diligence processes, research and other tasks related to our investments in The Footprint Fund I.

- You share our passion for sustainability and have high ambitions for working in this field professionally
- You have a strong, analytic mind and structured approach to problem solving
- You have strong quantitative skills and confidence with working in Excel
- You are efficient, good at prioritizing and managing your own time and work independently on tasks while also enjoying being part of a team
- You are ideally at your 5. or 6. semester or are just about to get started on your M.Sc.
- Speak and write fluent English (our corporate language is English)
- Strong PowerPoint skills a plus
- The job will be approx. 15-20 hours/week distributed across 2-3 days

Please send your resume and application to recruiting@thefootprintfirm.com

AI Analyst

This role will focus on structuring and improving the way we work with AI across various areas of our business, both internally and within the investment and advisory sides of our business. You will play a role in defining and executing our approach, experimenting with different types of tools and approaches together with Footprint team members.

- You share our passion for sustainability and emerging tech
- You have strong analytical skills, are curious by nature and like to solve challenging assignments
- You are studying a B.Sc. or M.Sc. possibly within data science, computer science, engineering, business or a related field (ideally in your 5th–6th semester or just starting your M.Sc.)
- You have a good understanding of AI/ML fundamentals and trends
- You have experience with AI tools or coding (e.g. Python, LLM APIs)

- You are structured, efficient, proactive, and confident working independently as well as in a team
- Speak and write fluent English (our corporate language is English)
- The job will be approx. 15-20 hours/week distributed across 2-3 days
